AI-Powered Prototyping:

Building a car marketplace site

Magdalena Sapkowska UX Camp, October 2025

Why We're Here

Explore how AI can accelerate prototyping for designers — Part 1

AI can change the way we work

Prompt creation, tips and tricks, debugging — Part 2

Explore strategies

Share tips and tricks

Building a car marketplace site — Part 3

Q&A — Part 4

How AI can accelerate prototyping for designers

In AI prototyping, we shapehow the system behaves and responds,

Creating an interactive prototype can be faster than stitching static mocks

Prompt creation, tips and tricks, debugging

Prompting Strategies

💬 Strategy 1:
Describe what you want to build

- Reference **behaviours**, **effects**, **common components**, **emotions**
- Give **examples**
- Be rather **detailed**
- Provide **context**
- Include **constraints**
- Use **common industry terms** and buzzwords for components and effects (for precision)

Create a minimalist feature section with 3 cards, using pastel gradient background and cards with frosted glass effect.

📸 Strategy 2:
Use visual references

- **Attach visual references**
  - Screenshots or frames from **Figma**
  - Screenshots from **Mobbin**
  - Screenshots of **live sites** you like
- **Describe what to keep vs. change**
  - *Use this layout, but change colours to green palette*
  - *Keep card structure, replace images and copy*
- **Refine with text prompts**
  - *Same grid layout as screenshot, but with hiking events instead of products*

🤖 Strategy 3:
Work with LLMs

- Use **ChatGPT** or other LLMs if:
  - You know what you want to build, but **struggle to describe** it precisely.
  - You need help finding the right words, **structure**, or **inspiration**.

Tips and tricks

🤝 Treat AI as a Co-Creator:

- **Start Broad**
  - Use short, open prompts, let AI surprise you.
  - Example: *"Design a playful app for exploring nature."*
- **Embrace the Unexpected**
  - AI might add new sections or animations.
  - Delete what doesn't fit, build on what inspires.
- **Remix Freely**
  - Combine the best ideas.
  - Example: *"Keep the hero animation, replace the gallery with cards."*
- **Give Context**
  - Add mood boards or references to guide style and cut randomness

✂️ Break down complex projects into manageable steps

- Complex projects need multiple follow-up prompts - **not one big fix**
- Use **small**, **focused steps** for better results
- This keeps code organised, easier to maintain, and **limits errors** in large builds
- Makes it also easier to **revert** without loosing too much results
- Highlight parts of the output with **Select tool** to change it with precision - perfect for quick fixes or targeted updates
- Chat GPT can **help planning** the division of your project into smaller steps

😎 Give components from Figma and React

- You can give your **Figma frames** or **Figma components** to the AI prototyping tools
- Organise components with **auto-layout** to for better spacing and hierarchy
- **Rename layers,** best with AI tool in Figma.
- Provide frames **one by one**, not multiple frames in a section
- You can also give code from **react component libraries** like Material UI, Chakra UI or others to include specific components
- You can give motion or styling with Third-party Tailwind libraries like AutoAnimate or Framer Motion

Debugging strategies

🤷‍♀️ Roll back & rephrase your prompt

- Undo recent change and write a **clearer**, **smaller** prompt.
- Example: instead of *“Add login and payment flow”*, split into two prompts:
  - *“Add login flow”*
  - *“Add payment flow”*

🖼️ Screenshot UI and Console

- **Screenshot errors** and elaborate what needs to be fixed and how
- Look for red error messages in the **code console** and copy - paste or screenshot them

🤔 Provide context

- **Provide context** to lovable or Figma Make: Don’t just paste the error, add what you were trying to do: *“I added a login form. Now I get this error in the console…”*
- **Get a second opinion** - share the error with ChatGPT or Claude for alternative explanations or fixes

Building a car marketplace site

🎯 Concept

- Describe your design goal in one clear sentence.
- *Example: "Design the homepage for a friendly, social-first platform connecting hiking and outdoor sports enthusiasts."*

👥 Target Audience

- Who is it for?
- Age range
- Languages or regions

🎨 Visual + UX Guidelines

- Style: (e.g., Clean, minimalist, modern)
- Primary Colour used for CTA buttons and accents: (#HEX)
- Typography: (Font name)
- Background: (Colour + feel)
- Tone of Voice: (e.g., Informal, inclusive, professional)

📐 Layout Sections (Main page or other pages or flows): List key frames or screens in order:

1. Menu / Header – main navigation
2. Hero Section – headline, CTA, image
3. Content Sections – grids, galleries, cards, etc.
4. Footer – links: Imprint, About, Privacy, Terms, Contact (use placeholder links)

💡Tips:

- Provide one Figma frame per section.
- Use Auto Layouts, clear naming, and consistent spacing.
- Add references, mood boards, or screenshots.

✨ Golden Prompt ✨

A Golden Prompt is a clear, structured template that gives AI all the essential context - goal, audience, style, and layout, so it can generate consistent, high-quality designs with minimal rework.

✨ Golden Prompt in action ✨

Work in groups 🙌

Use the prompt to create what we need - a Figma Make page that serves as the homepage for a car marketplace website.
I will paste the prompt into slack, ux-camp-2025 channel

🎯 Concept
Design the homepage for **ElectriCar**, a friendly, modern marketplace for used electric vehicles, where users can search for cars and browse listings easily.

👥 Target Audience

- Adults aged 30 – 60, interested in buying used electric cars
- Based in Europe
- Main language: English

🎨 Visual + UX Guidelines

- Style: Clean, minimalist, modern
- Primary colour: #076FE6
- Typography: Make it Sans
- Background: White, with generous white space
- Tone of voice: Friendly yet professional

📐 Layout Sections (Homepage)

1. Menu / Header
   - Logo (“ElectriCar”) - generate it
   - Main navigation with placeholder for search (we will add it later)
2. Hero Section
   - Large image (car or modern EV setting)
   - Prominent search mask for finding vehicles
3. Recommendations
   - Showcase most popular listings
4. About Electric Cars
   - Short, informative section about EVs and their benefits
5. Recently Added Cars
   - Display latest secondhand listings
6. Footer
   - Links: Imprint, About, Privacy, Terms, Contact (placeholder links)

Home page enhancements

Let’s make our output even better!

Expand your ElectriCar marketplace Figma Make page

1. Let users toggle between Day (light) and Night (dark) modes

2. Adapt the search mask to a more complex make → model search

3. Add Electric Vehicle Popularity Growth Chart - Line chart showing year-over-year EV adoption (2015–2025).

Time for a challenge

Work in pairs 🙌

Expand your ElectriCar marketplace Figma Make page

1.

Search results (list page)

What should be there? 🤔
Let's brainstorm!

2.

Detail Page of a vehicle

3.

Whatever your hearts desire 🥰
