Broadcasting Your Design

Magdalena Sapkowska

UX Camp · Berlin · July 2026

Every great broadcast has four roles

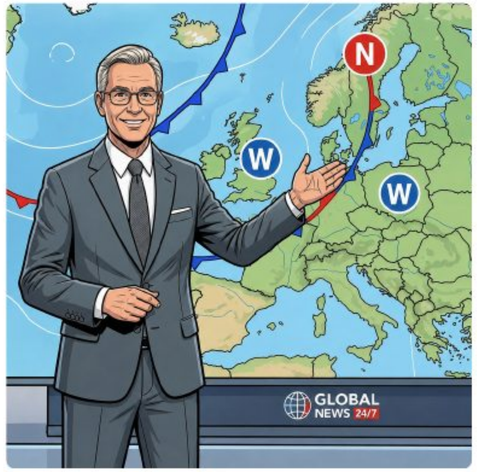

Producer

Anchor

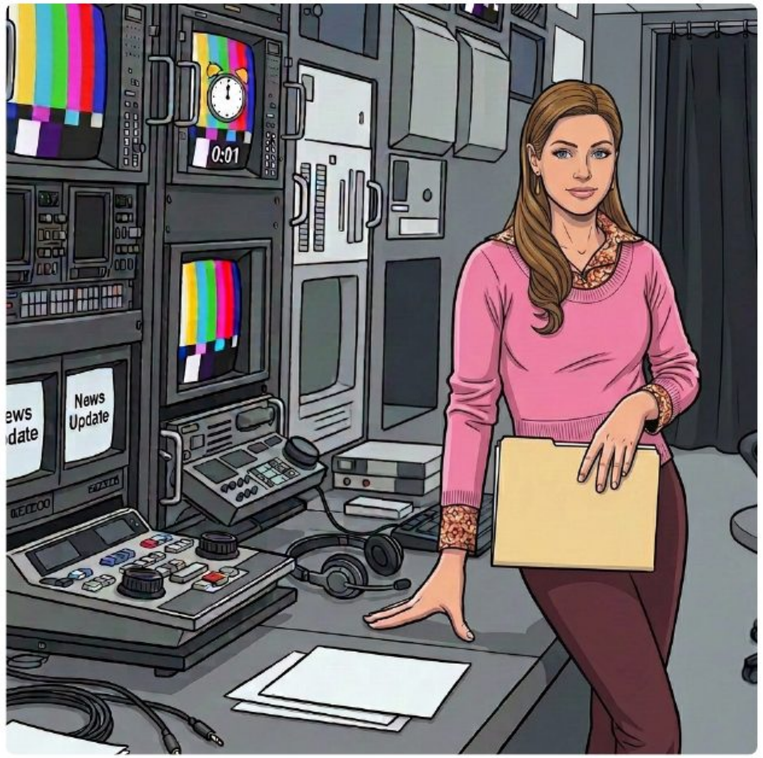

Reporter

Weatherman

The good news? Every designer is all four.

Producer

BUILD THE STORY BEFORE THE SLIDES.

① Write the story, not the slides

Answer why, what, how, and what's next before you start – more on this will come next!

② Use AI to think as your partner

Give ChatGPT the context, audience, and timing, then use it to shape your narrative.

③ Keep your slides simple and visual

Use mockups instead of paragraphs and reuse templates to stay consistent.

PRODUCER

Structure your story with the ⭐STAR Method⭐

S

Situation

💬 *Here's today's story*

What was happening? What problem were you solving?

T

Task

💬 *Here's why it matters*

What did you want to achieve?

A

Action

💬 *Here's what we did*

What did you design? Why this solution?

R

Result

💬 *Here's what happened*

What changed? What did you learn? What's next?

PRODUCER

How to get the presentation content going?

Tell your story to Chat GPT

Use voice prompts. Describe your project with STAR, the audience, and the time you have. Ask for a presentation outline in a set number of slides,

Spend time on the visuals

Keep text to a minimum. Use mockups, diagrams, and a consistent slide template to support your story.

Don’t forget to add some data

You can get numbers from your PM or Chat GPT and Codex, enabling Jira, Confluence, Email and Slack

Anchor

KEEP EVERYONE ON THE SAME PAGE.

① Tell the audience where you're taking them

Set expectations with phrases like "Today we'll...", "Next we'll...", and "Finally...".

② Guide the pace and time

Pause, switch gears clearly, and give people time to process. Look at the timer.

③ Let your personality shine

A smile, a joke, or a relatable example can keep people engaged.

ANCHOR

Step into the spotlight and become the anchor

💎 CORE TIP

Present, don't recite

Practice the story in your own words instead of reading the slides. Keep your voice loud and clear.

💎 CORE TIP

Know your airtime

Plan the pace of each section and keep an eye on the timer.

🚀 LEVEL UP

Practise the transitions

Clear transitions keep the audience oriented and the story moving.

🚀 LEVEL UP

Watch yourself once

Record a rehearsal to catch rushing, repetition, and flat delivery.

ANCHOR

Deliver like you're in a studio, live on air

💎 CORE TIP

Your energy is contagious

If you sound excited about your work, your audience is much more likely to care too.

💎 CORE TIP

Don’t read the slides

The audience can do that themselves. You want to go beyond the words presented on the screen.

🚀 LEVEL UP

Look up, not down

Don't spend the whole presentation looking at your notes or your second screen. Connect with your audience just like a presenter looks into the camera.

🚀 LEVEL UP

Recover gracefully

You don't have to be perfect. If you lose your train of thought, pause, smile, and continue. News presenters do it all the time.

Reporter

TAKE THE AUDIENCE INTO THE STORY.

① Leave the slides, go to Figma

Show the real product instead of only talking about it.

② Guide people through the process

Remember that your design file is familiar to you, but it can be overwhelming for everyone else.

③ Report on why, not just what you designed

Use research, prototypes, user feedback, and data to support your decisions.

REPORTER

Prepare the field for your report

💎 CORE TIP

Prepare a Figma page

Create a presentation-ready Figma page with only the screens, flows, and evidence you plan to show.

💎 CORE TIP

Prototype when you can

Movement makes the experience easier to understand than just disconnected screens. Click through the prototype before presenting!

🚀 LEVEL UP

Plan your route

Know exactly where you are going before opening the file. Arrange the screens in the order you will present them.

🚀 LEVEL UP

Make it feel real

Present prototypes inside an appropriate device frame, especially when showing mobile experiences.

REPORTER

Guide the audience through your Figma

💎 CORE TIP

Set the context first

Explain where the user is, what they are trying to do, and how they arrived at this point.

💎 CORE TIP

Narrate the experience

Describe what the user sees, does, and understands at each step. Do not only point out interface elements.

🚀 LEVEL UP

Guide, don't wander

Move through the file deliberately. Avoid searching for screens, zooming in and out, or jumping between unrelated areas.

🚀 LEVEL UP

Pause for the takeaway

After showing an important interaction, stop and explain why it matters before moving on.

REPORTER

Structure your walkthrough with the 🏔️ FIELD Framework 🏔️

F

Frame the context

Who is the user, where are they, and what are they trying to achieve?

I

Identify the route

Identify the route Decide which screens and interactions you need to show.

E

Eliminate clutter

Remove clutter and prepare a presentation-ready Figma page.

L

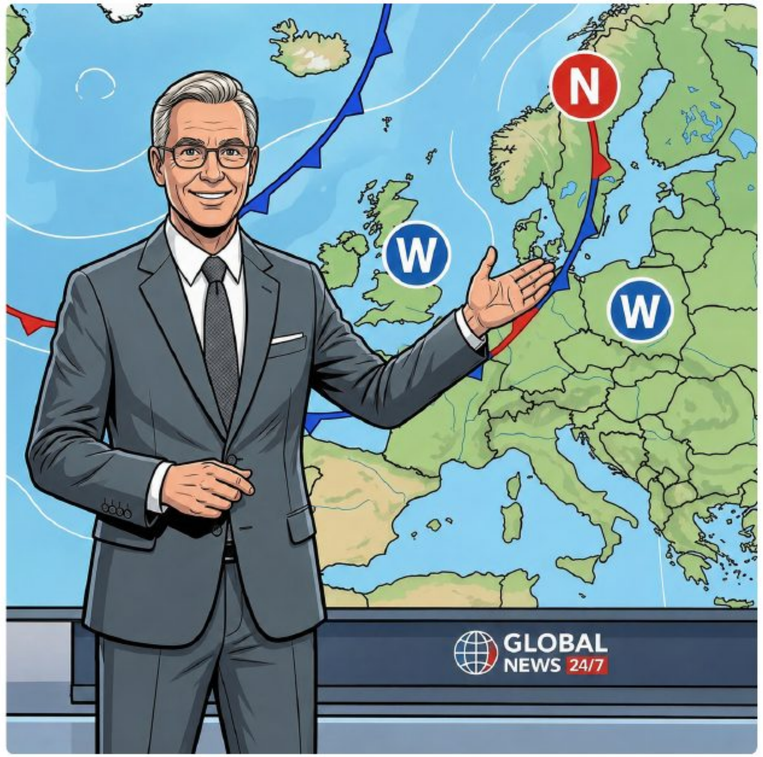

Lead the audience

Control the pace, explain each transition, and avoid unnecessary navigation.

D

Deliver the takeaway

Connect what you showed to the design decision, evidence, or expected outcome.

Weatherman

MAKE COMPLEXITY EASY.

① Keep it easy to follow

Move from the problem to the goal, then the solution, and finish with what's next.

② Turn complex ideas into simple explanations

Use stories, analogies, and everyday language instead of design and business jargon or acronyms.

③ Help people understand instantly

Vary your voice, pause at the right moments, and remember that your enthusiasm is contagious.

WEATHERMAN

Make complex ideas click and feel obvious.

💎 CORE TIP

Point to what matters

Highlight the area you're talking about. Use your cursor as a pointer. Don't make the audience search.

💎 CORE TIP

Use concrete examples

Instead of saying "improve information hierarchy", say "we made the price the first thing users notice." Speak like you're explaining it to a friend.

🚀 LEVEL UP

One idea per slide

If the audience doesn't know where to look, they'll stop listening. Let every slide communicate one clear message.

🚀 LEVEL UP

Reveal gradually

Introduce one idea at a time instead of showing everything at once. It keeps the audience following your story instead of reading ahead.

BREAKING NEWS
Designers now wear four hats.
Today's presenters are Producers, Anchors, Reporters and Weathermen, all at the same time.

Just in!

You're going live.

WORKSHOP

The UX Newsroom

🎬 Welcome to the Design Newsroom

- Today, you're not designers.
- You're the editorial team behind the evening news
- Together, you'll turn a breaking news headline into a **60-second live broadcast.**

⏱️ 10 minutes to prepare

🎙️ 60 seconds live broadcast

WORKSHOP

Your assignment

Each team receives:

- A real UX project
- A partially completed design story
- A broadcast worksheet
- The topics are based on real cases, but the details you add can be fictional. The goal is the storytelling, not accurately reproducing the original project.

Together, you'll create a complete UX update broadcast.

🎙️ One person will become the Anchor and present it live.

Every broadcast needs four roles

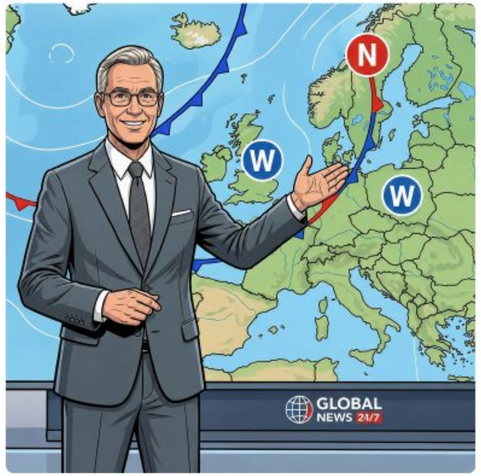

Producer

Build the story.

Reporter

Bring the proof.

Weatherman

Explain it simply.

Anchor

Present it live.

WORKSHOP

Your Newsroom Workflow

🎤 Newsroom Debrief

After the broadcast we'll discuss:

- Were the stories easy to follow?
- Could you picture the Figma walkthroughs?
- What proof made the updates convincing?
- What techniques you'll use in your next design review?

Thanks!
